

Must have Use real-time or dynamic data sources, and avoid relying on static JSON unless it's for initial prototyping. Create a responsive and clean UI (Consistent color scheme and layout). Validate user input robustly. Use intuitive navigation with proper menu placement and spacing. Use version control (Git) properly; one member managing the repo is not enough.

Nice to have: BUT WE WILL SURELY APPLY THIS: Ability to design backend APIs, model data, and set up a local database. Understand AI/code snippets thoroughly before using them; don't blindly copy-paste without adapting them to your project. Plan for offline or local solutions and don't rely entirely on internet connectivity or cloud-based tools. Use trendy technologies only if they add real value to your project.

Yes. I can now map the features from your 12-screen design. The overall app appears to be a **travel planning platform** where users can discover destinations/activities, create trips, build itineraries, manage budgets, interact with a travel community, and view trips on a calendar.

Flow for each screen:

Below is a detailed feature breakdown for **every screen**, including what each component should do.

Global Features

Before going screen-by-screen, these features are common across most logged-in screens:

Global Header

- * Application logo/name: **GlobeTrotter**
- * Search bar
- * Search/filter/sort controls where relevant
- * User/profile icon

* Navigation to:

- * Home
- * My Trips
- * Create Trip
- * Community
- * Calendar
- * Profile
- * Logout

Authentication

- * User registration
- * Login/logout
- * Session management
- * Password validation
- * Protected pages for authenticated users

Trip Management

- * Create trip
- * Edit trip
- * Delete trip
- * Save trip
- * View trip
- * Mark trip as ongoing/upcoming/completed
- * Add destinations
- * Add activities

* Build day-by-day itinerary

* Track expenses

Screen 1 — Login Screen

UI Components

- * Application logo/photo area
- * Username field
- * Password field
- * Login button
- * Register/Create Account option

Features

1. Username Input

User enters:

- * Username/email

Validation:

- * Required field
- * Valid username/email format
- * User must exist

2. Password Input

- * Password should be hidden by default
- * Required field
- * Minimum password requirements

3. Login

When user clicks ****Login****:

1. Validate fields
2. Send credentials to backend
3. Authenticate user
4. Create session/token
5. Redirect to Main Landing Page

4. Invalid Login

Display:

> Invalid username or password.

5. Registration Navigation

Clicking registration takes the user to ****Screen 2****.

Additional features you can add

- * Show/hide password
- * Remember me
- * Forgot password
- * Google/other OAuth login

Screen 2 — Registration Screen

![Image](https://images.openai.com/static-rsc-4/ZvJ4GY1ZGN7IDR1M03gT--4u0T-r2dHTBZ1Gkz2JCcyeUpXIplctVV6VnXH84ZBaEH30f_sG0nUetIxCtYxcRDp2xe8XhV50B_Q8WxZ76JrhAI_bFthA9FhI3qgoNDVbye8iwDHaOe-HIXIWJWtmCwRnvhBo5l0YxWSZgcTPeXOnDNRnxOI4GfbsdAyQbR9F?purpose=fullsize)

f1Jlk37tEiEbPxtcM6q76_RecnGAldZG6xcP3Wk9ecnKZaa?purpose=fullsize)

The design contains:

- * Profile/photo area
- * First Name
- * Last Name
- * Email Address
- * Phone Number
- * City
- * Country
- * Additional Information
- * Register User button

Features

1. Profile Picture

User can:

- * Upload profile picture
- * Change picture
- * Remove picture

2. Personal Information

Fields:

****First Name****

* Required

****Last Name****

* Required

****Email****

* Required

* Email format validation

* Check whether already registered

****Phone Number****

* Number validation

* Country code support

****City****

* User's current/home city

****Country****

* Country selection/dropdown

3. Additional Information

Large text field for:

* Travel preferences

* Interests

* About the user

* Preferred activities

Example:

> "I enjoy hiking, beaches and historical places."

4. Register User

On click:

``text

Validate data

Check duplicate email

Create user

Hash password

Store profile

Login / redirect

...

Additional features

- * Password + confirm password
- * Terms & conditions
- * Privacy policy
- * Email verification
- * Phone verification

Screen 3 — Main Landing Page

This is the ****home/dashboard page****.

The design contains:

- * Header
- * Search
- * Banner image
- * Search/filter controls
- * Top Regional Selections

- * Previous Trips
- * Plan a Trip button

1. Hero/Banner Section

Large banner area for:

- * Featured destinations
- * Travel promotions
- * Recommended destinations
- * Seasonal destinations

Could contain:

> Explore the world with GlobeTrotter

2. Search

User can search for:

- * City
- * Country
- * Destination
- * Activity
- * Trip

Example:

```text

Search: Paris

```

Results can lead to Screen 8.

3. Search Filters

The design contains controls such as:

- * Group by
- * Filter
- * Sort

Possible filters:

- * Country
- * Region
- * Budget
- * Popularity
- * Activities
- * Rating

4. Top Regional Selections

Display destination cards.

Example:

```text

Europe

Asia

North America

South America

```

Each card can contain:

- * Image
- * Destination name
- * Country
- * Popularity
- * Average cost

Clicking a destination opens its details/search results.

5. Previous Trips

Show trips previously created by the user.

Each card can show:

- * Destination
- * Trip dates
- * Trip status
- * Image

* View button

6. Plan a Trip

Button takes user to ****Create New Trip — Screen 4****.

Screen 4 — Create a New Trip

This is one of the most important screens.

The design contains:

* Plan my new trip

* Start Date

* Select Place

* Start Date

* End Date

* Suggestions for places/activities

* Destination cards

1. Trip Dates

Fields:

* Start date

* End date

Validation:

```
```text
```

Start Date < End Date

```
```
```

Cannot select dates in an invalid order.

2. Select Place

User selects:

- * Country

- * City

- * Destination

Could use autocomplete.

Example:

```
```text
```

Select Place

→ Paris, France

```
```
```

3. Destination Suggestions

The system recommends:

- * Places
- * Tourist attractions
- * Restaurants
- * Museums
- * Parks
- * Activities
- * Events

Cards can contain:

- * Image
- * Name
- * Description
- * Location
- * Rating
- * Estimated cost
- * Add button

4. Activity Selection

User can select activities for the trip.

Example:

``text

Eiffel Tower [+ Add]

Louvre Museum [+ Add]

Seine Cruise [+ Add]

...

5. Continue

After selecting destination/date:

****Create Itinerary****

→ Screen 5

Screen 5 — Build Itinerary

This is the core trip-planning screen.

The design contains multiple sections.

Section 1

Each section represents a part of the itinerary.

It contains:

* Section description

* Date range

* Budget

* Budget of this section

1. Add Section

Button:

****+ Add another Section****

Creates:

``text

Section 4

Section 5

Section 6

...

``

2. Section Information

Each section can have:

* Title

* Description

* Start date

* End date

* Activities

* Location

* Budget

3. Date Range

Example:

```text

Date Range: 10 Jan → 12 Jan

```

4. Budget

User can enter:

```text

Budget of this section: ₹15,000

```

System should calculate:

* Planned expenses

* Actual expenses

* Remaining budget

5. Edit/Delete Section

Each section should ideally have:

- * Edit
- * Delete
- * Duplicate
- * Reorder

6. Save Itinerary

After completing sections:

****Save Trip****

The trip becomes available under:

- * My Trips
- * Profile
- * Calendar

Screen 6 — User Trip Listing

This is the ****My Trips**** page.

The design divides trips into:

Ongoing

Trips currently happening.

Example:

``text

Paris Trip

12 Aug – 18 Aug

Short Overview of the Trip

...

Upcoming

Future trips.

Completed

Past trips.

Features

Search

Search trips by:

* Destination

* Trip name

* Date

Group By

Possible grouping:

- * Status
- * Destination
- * Date
- * Country

Filter

Possible filters:

- * Ongoing
- * Upcoming
- * Completed
- * Budget
- * Destination

Sort

Sort by:

- * Date
- * Name
- * Recently created
- * Budget

Trip Card

Each card can display:

- * Destination
- * Trip title
- * Dates
- * Image
- * Short description
- * Budget
- * Status

Actions:

- * View
- * Edit
- * Delete
- * Duplicate
- * Share

Screen 7 — User Profile

The profile screen contains:

- * Profile picture
- * User details

- * Edit options
- * Preplanned trips
- * Previous trips

1. Profile Information

Display:

- * Name
- * Email
- * Phone
- * City
- * Country
- * About me
- * Travel preferences

2. Edit Profile

User can modify:

- * Profile picture
- * Name
- * Email
- * Phone
- * Location
- * About information
- * Travel preferences

3. Preplanned Trips

Trips that haven't happened yet.

Each card:

- * Destination
- * Date
- * Image
- * Trip name
- * View button

4. Previous Trips

Completed trips.

Actions:

- * View
- * Edit
- * Duplicate
- * Delete

5. Account Settings

Should include:

- * Change password

- * Notification settings

- * Privacy

- * Logout

- * Delete account

Screen 8 — Activity Search / City Search

This screen is essentially the **search/discovery page**.

The design shows:

- * Search field

- * Group By

- * Filter

- * Sort

- * Results

Search Types

User can search:

``text

City

Country

Activity

Tourist attraction

Restaurant

Event

...

Search Results

Each result should show:

- * Name
- * Image
- * Location
- * Description
- * Rating
- * Price/budget
- * Category

Filter

Possible filters:

****Location****

- * Country
- * City
- * Region

****Activity****

* Adventure

* Historical

* Food

* Shopping

* Nature

* Entertainment

****Budget****

* Low

* Medium

* High

****Rating****

* 5 stars

* 4+ stars

* 3+ stars

Sort

* Popularity

* Rating

* Price

* Distance

* Alphabetical

Result Details

Clicking a result opens detailed information:

``text

Destination

Description

Photos

Activities

Cost

Add to Trip

...

Add to Trip

User can directly add an activity/destination to an existing trip.

Screen 9 — Itinerary View + Budget

This is the detailed itinerary screen.

The design shows:

> Itinerary for a selected place

with:

* Day 1

* Day 2

* Physical Activity

* Expense

Day-by-Day Planning

Example:

```text

DAY 1

09:00 Eiffel Tower     ₹2,000

12:00 Lunch           ₹1,000

15:00 Louvre Museum   ₹1,500

...

### Activity

Each row represents:

\* Time

\* Activity

\* Location

\* Duration

\* Notes

### ### Expense

Each activity can have an expense.

Example:

| Activity  | Expense |
|-----------|---------|
| -----     | -----:  |
| Museum    | ₹1,500  |
| Food      | ₹800    |
| Transport | ₹500    |

### ### Budget Calculation

System automatically calculates:

```
```text
```

Total Budget

- Planned Expenses

= Remaining Budget

```
```
```

Also:

```text

Day 1 Expense

Day 2 Expense

Day 3 Expense

Total Trip Expense

```

### ### Additional Features

- \* Add activity
- \* Remove activity
- \* Edit activity
- \* Reorder activities
- \* Change time
- \* Add expense
- \* Mark activity completed
- \* Add notes
- \* Add transportation

### ### Budget Warning

If:

```text

Expenses > Budget

```

show:

> You have exceeded your planned budget.

---

## # Screen 10 — Community Tab

This is the social/community part of the application.

The design shows:

- \* Search
- \* Group By
- \* Filter
- \* Sort
- \* Community posts

## ### Community Feed

Users can share:

- \* Travel experiences
- \* Trip itineraries
- \* Photos
- \* Recommendations
- \* Tips
- \* Destination reviews

### ### Post

A post can contain:

- \* User profile
- \* Username
- \* Destination
- \* Text
- \* Photos
- \* Trip information

### ### Interactions

Users should be able to:

- \* Like
- \* Comment
- \* Share
- \* Save
- \* Report

### ### Search

Search community content by:

- \* Destination
- \* User

- \* Activity

- \* Keyword

### ### Filter

Possible filters:

- \* Recent

- \* Popular

- \* Following

- \* Destination

- \* Activity

### ### Community Post Details

Clicking a post opens:

``text

Post

Comments

Likes

Related destination

...

### ### Suggested Feature

Allow users to:

**\*\*Import itinerary from community post\*\***

For example:

> "5-Day Paris Itinerary"

→ **\*\*Add to My Trips\*\***

This would connect the community and itinerary functionality nicely.

---

# Screen 11 — Calendar View

The design contains a monthly calendar.

Example:

```text

January 2024

Sun Mon Tue Wed Thu Fri Sat

...

...

Calendar Features

Display:

- * Upcoming trips
- * Ongoing trips
- * Completed trips
- * Individual activities

Trip Events

For example:

``text

5–10 PARIS TRIP

12–16 TOKYO ADVENTURE

20–22 NYC GETAWAY

``

Navigation

Buttons:

- * Previous month
- * Next month
- * Today

Click on Trip

Clicking an event should open:

****Trip Details / Itinerary****

Calendar Filters

Filter by:

- * Trips
- * Activities
- * Destinations
- * Status

Additional Features

- * Add trip from calendar
- * Edit trip dates
- * Drag-and-drop trip dates
- * Sync with external calendars
- * Set reminders

Screen 12 — Admin Panel

This is the administrative dashboard.

The design contains:

- * Search
- * Group By
- * Filter
- * Sort
- * Admin navigation
- * Analytics dashboard

The dashboard contains visualizations such as:

- * Pie chart
- * Line chart
- * Bar chart
- * Statistics

Admin Navigation

Possible sections:

```text

Manage Users

Manage Trips

Manage Activities

Manage Destinations

Manage Community

Analytics

Reports

...

---

## ## 1. User Management

Admin can:

- \* View users
- \* Search users
- \* Filter users
- \* Sort users
- \* View user details
- \* Edit user
- \* Suspend user
- \* Delete user

Information:

```text

User

Email

Country

Trips

Joined Date

Status

...

2. Trip Management

Admin can:

- * View all trips
- * Search trips
- * Filter trips
- * Delete inappropriate trips
- * View trip statistics

3. Destination Management

Admin can:

- * Add destination
- * Edit destination
- * Delete destination
- * Upload destination images
- * Update descriptions
- * Add activities
- * Set estimated costs

4. Community Moderation

Admin can:

- * View posts
- * Review reported posts
- * Delete posts
- * Suspend users
- * Remove inappropriate comments
- * Handle reports

Admin Analytics

The graphs shown in the design can represent:

Pie Chart

For example:

****Trips by region****

```text

Asia     35%

Europe   30%

America   20%

Others    15%

...

### Line Graph

Could show:

**Trips created over time**

text

Jan → 120

Feb → 180

Mar → 240

Apr → 310

...

### Bar Graph

Could show:

**Most popular destinations**

text

Paris

London

Tokyo

Dubai

...

### ### Other KPIs

Admin dashboard can show:

- \* Total users
- \* Active users
- \* Total trips
- \* Upcoming trips
- \* Completed trips
- \* Total destinations
- \* Total community posts
- \* Most popular destination
- \* Average trip budget

---

### # Complete User Flow

Your screens can be connected like this:

```text

Profile

Screen 7

...

Recommended Feature Set

If this is going to become a **real full-stack project**, I would organize the features into these modules:

| Module | Main Features |
|-----------------------|--|
| ----- | ----- |
| Authentication | Login, registration, logout, password reset |
| User Profile | Profile, preferences, profile picture |
| Destination Discovery | Search, filter, sort, destination details |
| Trip Management | Create, edit, delete, duplicate trips |
| Itinerary | Day-by-day activities, times, locations |
| Budget | Expense tracking, budget calculation, warnings |
| Calendar | Monthly trips, activities, reminders |
| Community | Posts, likes, comments, sharing |
| Recommendations | Suggested destinations/activities |
| Notifications | Trip reminders, community notifications |
| Admin | User/content/destination management |
| Analytics | Trips, users, destinations, engagement |

Important Features Missing From the Wireframe

Your wireframe already covers the ****main functional screens****, but if you're implementing the actual application, I'd strongly recommend adding these:

1. Trip Details Screen

A dedicated page showing:

- * Destination
- * Dates
- * Total budget
- * Itinerary
- * Activities
- * Map
- * Expenses
- * Trip members

2. Destination Details Screen

For every destination:

- * Photos
- * Description
- * Attractions
- * Activities
- * Restaurants

- * Hotels
- * Estimated cost
- * Weather
- * Map
- * Reviews

3. Map Integration

Very useful for this app.

Show:

```text

Hotel

Activity 1

Restaurant

Activity 2

...

with routes between locations.

### ### 4. Notifications

Examples:

> Your Paris trip starts tomorrow.

> You have exceeded your Day 2 budget.

> Someone commented on your travel post.

### ### 5. Sharing

Allow users to share trips through:

- \* Public link
- \* Community
- \* Social platforms

### ### 6. Collaboration

For group trips:

- \* Invite travelers
- \* Multiple users edit itinerary
- \* Shared expenses
- \* Comments
- \* Voting on activities

---

## ## Overall Architecture of Your App

Your design essentially represents **three major user experiences**:

### ### Traveler

``text

Register/Login

Discover destinations

Create trip

Build itinerary

Track budget

Calendar

Complete trip

Share experience

...

### ### Community

``text

Travelers

Create posts

Share experiences

Like / Comment

Discover other trips

Reuse itineraries

...

### Admin

```text

Admin Login

Dashboard

├— Users

├— Trips

├— Destinations

├— Activities

├— Community

└— Analytics

...

This gives you a fairly complete **GlobeTrotter travel-planning platform**, rather than just a basic itinerary app.
